🎓 Education

KTH Royal Institute of Technology	M.Sc. in Computer Science	Aug 2025 –Jun 2027
• Selected for the Zhejiang University–KTH 3+2 Joint Master’s Program (accelerated B.Eng.–M.Sc. pathway).		
Zhejiang University	B.Eng. in Computer Science and Technology	Aug 2022 –Jun 2025

💼 Work Experience

Microsoft STCA (Beijing, China)	Software Engineer Intern	Jun 2026 –Sep 2026
--	--------------------------	--------------------

- **Automated Evaluation System Construction & Tuning:** Participated in building a multi-agent evaluation pipeline based on LLM-as-a-Judge. Responsible for case synchronization and integration from the product side to the testing side. By deeply tuning the prompt and grading rubrics of the evaluation agent, and combining it with manual verification, improved the evaluation accuracy and consistency of the model in complex Excel workbook operations by 20%-30%.
- **Agent Framework Performance & Context Optimization:** Optimized the underlying logic for scenarios where the Agent retrieves complex external data (e.g., email streams). Designed and implemented page-based data truncation, batch request mechanisms, and automatic deduplication and merging of homologous Thread sessions. Significantly reduced the token usage of redundant contexts, substantially lowered the system API call latency, and improved response efficiency.

ErholCare (Stockholm, Sweden)	Mobile Developer Intern	Nov 2025 –Feb 2026
--------------------------------------	-------------------------	--------------------

- **AI-Driven Mobile Application Development:** Designed and developed a comprehensive AI-driven mobile application for care workers and healthcare organizations, significantly improving efficiency in documentation, scheduling, and team collaboration.
- **Performance Optimization & UX Upgrade:** Optimized the app’s performance to ensure smooth operation across various devices and improved the user experience in complex interfaces, as measured by user satisfaction surveys showing a significant improvement, by doing intensive debugging, performance optimization, and closely collaborating with users to refine the interface based on their feedback.

🧩 Project Experience

Mini-OS	C and RISC-V assembly
----------------	-----------------------

- Built a minimalist Linux-like OS for RV64 with shell, file I/O, process management and other essential functionalities.
- Strengthened understanding of Linux internals and low-level system design.

Mini-SQL	C++
-----------------	-----

- Developed a lightweight DBMS with SQL parsing, query execution, and character-based user interface.
- Practiced object-oriented design and modular architecture for scalable systems, strengthened understanding of relational database principles.

Image Colorization using GANs	Python (PyTorch, Tkinter)
--------------------------------------	---------------------------

- Trained a GAN with U-Net generator and ResNet-based discriminator to colorize grayscale images.
- Built a GUI application for interactive image colorization and model visualization.

⚙️ Skills

- **Programming Languages:** C/C++, Java, Python, TypeScript, Node.js, Dart, RISC-V Assembly, Verilog

- **Frameworks & Tools:** PyTorch, Spring Boot, Flutter, MySQL, Git, Xilinx Vivado

 Honours and Awards

- | | |
|--|-----------------------|
| • Third Prize Scholarship, Zhejiang University | 2022-2023 |
| • National Encouragement Scholarship (China) | 2022-2023 & 2024-2025 |
